

Job Descriptions for the role of

- MERN Stack Developer
- MEAN Stack Developer
- Python Developer
- Data Scientist / Data Analyst
- Cybersecurity Analyst
- Game Developer
- Flutter Developer
- Golang Developer
- Machine Learning Engineer

♦ 1. MERN Stack Developer (1–2 Years Experience)

About The Role

The MERN Stack Developer works in the area of Software Engineering, encompassing the development, maintenance, and optimization of web applications. The role requires building scalable front-end and back-end solutions, integrating databases, and working closely with cross-functional teams.

Responsibilities

1. Develop and maintain web applications using MongoDB, Express.js, React.js, and Node.js.
2. Design reusable front-end components and integrate with backend APIs.
3. Debug, troubleshoot, and optimize application performance.
4. Participate in code reviews and follow software engineering best practices.
5. Collaborate with designers, QA engineers, and senior developers.
6. Deliver assigned tasks within timelines with minimal supervision.

Technical Skills Required

- JavaScript (ES6+), React.js (hooks, state, props)
- Node.js & Express.js
- MongoDB & Mongoose
- REST APIs, Git, basic deployment knowledge

Soft Skills Required

Technical Skills Required

- Python programming fundamentals
- Django / Flask basics
- SQL and relational database concepts
- Object-Oriented Programming (OOP)
- Git and version control

Soft Skills Required

- Logical and analytical thinking
- Patience and persistence in debugging
- Good documentation and communication skills
- Willingness to learn new tools and frameworks
- Ability to accept feedback

Experience Required: 1–2 years

Salary: ₹4 LPA – ₹7 LPA (disclosed)

Education: B.Tech / B.E. in Computer Science / IT

Industry Type: IT Services / Product / Startup

Employment Type: Full Time, Permanent

Role Category: Software Development

◆ 4. Data Scientist / Data Analyst (1–2 Years Experience)

About The Role

The Data Scientist / Data Analyst works with structured data to generate insights, support business decision-making, and build basic predictive models. The role includes data collection, preprocessing, visualization, and communication of findings.

Responsibilities

1. Collect, clean, and preprocess datasets for analysis.
2. Perform exploratory data analysis (EDA) to discover trends.
3. Build and validate basic machine learning models.
4. Create dashboards and reports for business teams.

The Game Developer is responsible for designing, developing, and maintaining interactive 2D/3D games. The role involves working with game engines, implementing gameplay mechanics, optimizing performance, and collaborating with designers and artists.

Responsibilities

1. Develop games using Unity (C#) or Unreal Engine (C++).
2. Implement gameplay logic, physics, and animations.
3. Optimize game performance and memory usage.
4. Debug and fix gameplay or UI issues.
5. Collaborate with designers and artists for asset integration.
6. Participate in testing and release cycles.

Technical Skills Required

- Unity or Unreal Engine
- Object-oriented programming
- Game physics and mechanics
- Debugging and optimization
- UI/UX basics

Soft Skills Required

- Creativity and imagination
- Team collaboration and coordination
- Patience and perseverance
- Openness to feedback
- Passion for gaming and continuous learning

Experience Required: 1–2 years

Salary: ₹3.5 LPA – ₹6 LPA (disclosed) / Not disclosed

Education: B.Tech / B.E. / MCA / Game Design

Industry Type: IT / Gaming / Product

Employment Type: Full Time, Permanent

Role Category: Game Development
